PART 1: EVENTS DATABASE

Party Planner LLC is a full service event planning, design, and Production Company located in Columbus, Ohio. The company employs people who plan the event and people who work the event. Based on the company's needs, you have decided on the following database structure.

- **Event Type:** This table contains the type of event, i.e. sporting event, art event, etc. Each event is uniquely identified by a unique TypeID.
- **Location:** This table contains the location of the event. Each location is identified by a unique LocationID.
- **Organizer:** This table contains the name of the person who will organize the event. Each organizer is identified by unique OrganizerID.
- **Scheduled Events:** This table contains the OrganizerID, LocationID, and TypeID of the scheduled event. All these fields link to their respective tables. For example, OrganizerID R0001 links the OrganizerID field in the Organizer table, which contains the organizer named, john Smith. Each scheduled event is identified by a unique EventID.
- **Workers Info:** This table contains all the information about specific worker, such as their first and last name, address, etc. Each worker is identified by a unique WorkerID.
- **Worker Assignments:** This table contains the employees' schedules, i.e. the events they are scheduled to work. Each worker's assignment is identified by a unique AssignID.
